We have worked on a multitude of vessels developing turnkey solutions from a bare deck up and have supplied equipment designs to enhance, improve or modify existing deck layouts. We have a track record in the rapid engineering of equipment to support our clients ever changing project plans.

Our team have completed projects on a host of UK and European windfarms including London Array, Kincardine and Gwynt y Môr to name but a few.

Design and project engineering of a double swan neck cable handling system

Design and supply of a bespoke second end spread with quadrant sliding system

Design of a modular cable pull in system for an offshore windfarm platform
