Our engineers have designed and supplied new build carousels and reels for a variety of cable storage and cable lay requirements and have extensive experience in the modification of 3rd party units to increase their capacity or improve their functionality.

We are regularly called in by clients for third party reviews and support work to rectify the problems which occur in other suppliers designs with our own equipment well known for its robust structural design and built in mechanical redundancies. Ardmore Craig has worked on projects such as the Humber Gateway and Gwynt y Môr offshore wind farms.

Design and project engineering for an onshore storage carousel and spooling system

Design and supply of a 175 tonne capacity reel for cable handling and storage

Design modifications and analysis to facilitate a single mobilisation lift of a 540 tonnes
